Qualifications and Interests

My desire to study UI/UX design and software development (especially frontend development) has come about through my fascination on how software works on different platforms. I have interest in UI/UX design because I like to create some design that not only have an artistic value but also have a functionality value in every design and I find out that design and programming are two things that when we put together it will produce something good and beneficial like an mobile app or web app.

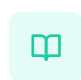

Currently i have learn some programming language like **Javascript, Typescript, PHP, Dart and little bit of Swift**. I also focus on learning a javascript framework like **Vue.js and React.js** and i also have experience on mobile development like **React Native**. My last project was create an online learning platform that work both on android and ios.
